Ontario Influenza Bulletin 2006-2007 Season

SURVEILLANCE Week 7 (February 11 – 17) 2007

This issue of the Ontario Influenza Bulletin provides information on the surveillance period from February 11 – 17, 2007, (Week 7). The analysis for this issue occurred on Thursday February 22, 2007, therefore all data is current to that date unless otherwise specified.

Overall, influenza activity in Ontario during Week 7, 2007, was slightly increased when compared to the previous week. However, the increase in activity was greatest in the North East region. Ninety-five sporadically occurring cases of influenza A were reported through iPHIS from health units, while 10 new institutional outbreaks of influenza A were also reported. Toronto reported 'widespread" influenza activity, while Central West, Central East, Eastern, North East, North West and South West regions reported 'localized' influenza activity levels.

NOTE:
An error related to the number of institutional respiratory infection outbreaks found in table 4a, page 5 has been identified in the *Ontario Influenza Bulletin* for weeks 5 and 6. The counts included a number of duplicate records inflating the number of outbreaks listed in those issues. The affected issues will be updated and re-posted to the *Ontario Influenza Bulletin* Website. A notice will be sent once this has occurred.

For a definition of influenza-like illness (ILI) activity levels and links to websites providing current influenza information from other sources, please refer to the attached Appendix- I. If you would like to provide feedback on the Bulletin, please contact Christine D'Souza (christine.dsouza@moh.gov.on.ca, 416-212-5323) or Anne-Luise Winter (anne-luise.winter@moh.gov.on.ca, 416-327-7301).

Table 1: Summary of laboratory-confirmed influenza cases and institutional influenza outbreaks by health region (Week 7 2007).

Lab-confirmed Influenza cases*	HEALTH REGION							TOTAL
	North West	North East	Eastern	Central East	Toronto	South West	Central West	
Influenza A	2	21	8	16	19	7	22	95
Influenza B	0	0	0	0	0	0	0	0
Influenza A & B	0	0	0	0	0	0	0	0
Total new cases	2	21	8	16	19	7	22	95
Institutional influenza outbreaks‡	**0**	**4**	**2**	**0**	**2**	**1**	**1**	**10**

SOURCE: MOHLTC [iPHIS, Health Unit Reports to PHD]

* Includes reports of sporadically occurring influenza through iPHIS, as well as cases in institutional outbreaks, with dates of onset in the surveillance period.

‡ Laboratory confirmed outbreaks in institutions with onset date of symptoms during the surveillance period.

SOURCE: MOHLTC [iPHIS, Health Unit Reports have been extracted using CRN at PHD]

* Cumulative case counts include late reports and records that are otherwise reconciled. Therefore, cumulative counts may not equal new cases plus previous cumulative value.

† Episode Date for a case corresponds to the earliest date on record for the case according to the iPHIS hierarchy (Symptom Date > Clinical Diagnosis Date > Specimen Collection Date > Lab Test Date > Reported Date)

Influenza Subtype(s):
During Week 7, 2833 isolates were received by the Public Health Agency of Canada, with a total of 491 testing positive for influenza A and 5 for influenza B. The majority of influenza A isolates (259) were from Ontario (52.7%), while 102 (20.8%) were from British Columbia, and 58 (11.8%) from Alberta. Four influenza B isolates were from British Columbia (80.0%), while 1 (20.0%) was from Alberta.*

Antigenic Characterization:
The National Microbiology Laboratory (NML) has characterized 370 influenza viruses for the 2006-2007 influenza season: 125 A/New Caledonia/20/1999(H1N1)-like, 224 A/Wisconsin/67/05(H3N2)-like, 4 B/Malaysia/2506/2004-like, and 15 B/Shanghai/361/2002-like. All but the B/Shanghai/361/2002-like strain are included in the composition of the 2006-2007 Canadian influenza vaccine. Of the influenza A viruses characterized, 85% of the A(H1N1) viruses were from the West and 70% of the A(H3N2) viruses were from Ontario.**

Antiviral Resistance:
Since the start of the season, the NML has tested 327 influenza A isolates (119 H1N1, 208 H3N2) for amantadine resistance. None of the H1N1 isolates tested were resistant to amantadine; however, 20% (41/208) of the H3N2 isolates were resistant. Of the 218 isolates (212 influenza A, 6 influenza B) tested for oseltamivir resistance, none were found to be resistant.**

Note: Based on the World Health Organization recommendations, Canada's National Advisory Committee on Immunization (NACI) recommended the **2006-2007** influenza vaccine contain an **A/New Caledonia-like**, an **A/Wisconsin-like** & a **B/Malaysia-like** virus strain.

* These data have been obtained from the Respiratory Virus Detection tables of Public Health Agency of Canada for Week 7, 2007.
** These data have been obtained from the FluWatch report of the Public Health Agency of Canada for week 6, 2007.

APPENDIX - I

Definitions for influenza activity levels:

No Data: No activity report corresponding to the surveillance week was received at the Ministry of Health and Long-Term Care Call Centre by the Tuesday (at 4 p.m.) following the end of the surveillance period.

No Activity: No laboratory confirmed* influenza cases(s) or outbreak detected during the past four weeks within the influenza surveillance region, however, sporadically occurring **ILI** may be reported†

Sporadic: Sporadically occurring **ILI and laboratory confirmed influenza* case(s) with NO outbreaks** detected within the influenza surveillance region†

Localized: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in less than 50% of the influenza surveillance region(s)**†

Widespread: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in greater than or equal to 50% of the influenza surveillance region(s)**†

* Confirmation of influenza within the surveillance region at any time within the prior week
† Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist

Influenza-Like Illness (ILI) Definitions:

A) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which could be due to influenza virus. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

B) ILI/Influenza outbreaks:

Schools and work sites: greater than 10% absenteeism on any day, most likely due to ILI.

Residential institutions: two or more cases of ILI within a seven-day period, **including at least one laboratory confirmed case**.
